WORK EXPERIENCE

Tellmebye – Mataró, Spain

Software developer lead

[17/12/2024 – Current]

As Software Development Lead at Tellmebye, I was an essential part of the creation of:

- Internal function automation systems
- Adaptation and integration with external systems
- Visual and software modernisation of the entire platform
- Implementation of Artificial Intelligence applied to the funeral sector:
 - Restoration and colourisation of old images
 - AI-powered image quality enhancement

Always prioritising cost-effective solutions without sacrificing quality, evaluating all possible options to optimise costs.

During this period, Tellmebye achieved its highest client growth per year since its founding. My contributions and performance earned me a letter of recommendation from the company, available in my portfolio — link in the contact section.

Mercantec – Viborg, Denmark

Software Project Lead

[08/10/2024 – 08/12/2024]

For 2 months I relocated to Denmark to lead the development of the 3D Print Archive project at Mercantec, a Danish educational institution.

My role was to orchestrate the project from both a technical and management perspective: I coordinated the team, made decisions on architecture and prioritisation, and held biweekly meetings with the client in English to present progress, address questions and adjust scope based on real needs.

The result was a fully private, commission-built 3D file management platform featuring centralised file organisation, fast model retrieval, and in-browser 3D visualisation — with no dependency on third-party services. Built with React, Vite and Three.js.

The final result is live and accessible at: <https://3dprintarchive.socdata.dk/home>

My performance leading this project earned me a letter of recommendation from Mercantec, available in my portfolio — link in the contact section.

Tellmebye – Mataró, Spain

Software developer

[13/12/2023 – 08/10/2024]

During my internship, I implemented visual and performance improvements across the entire software, including:

- Optimised display of memorial walls in "Memorial Wall Premium" rooms
- New personalised image download functionality for digital frames

I contributed to improving the user experience and the overall performance of the platform.

After consolidating as a developer following my internship, I actively participated in the full development cycle of new features, from technical design through to deployment. I contributed to integrations with external services and APIs, and collaborated on the continuous improvement of code quality and the platform's user experience.

 **Salesians Mataró** – Mataró, Spain

Extracurricular sports instructor

[12/09/2020 – 21/06/2022]

During this role, I was responsible for introducing children aged 3 to 8 to new sports, fostering their social development through team-based activities, and monitoring their individual performance over time.

I also took full responsibility for the safety and well-being of all participants throughout every session.

EDUCATION AND TRAINING

Computer Engineer's Degree

UOC [01/06/2026 – Current]

City: Barcelona | Country: Spain | Website: <https://www.uoc.edu/en> | Field(s) of study: Information and Communication Technologies | Level in EQF: EQF level 6

Specialist Certificate in Artificial Intelligence and Big Data

Sa Palomera [22/09/2025 – 30/05/2026]

City: Blanes | Country: Spain | Website: <https://www.sapalomera.cat/> | Field(s) of study: Information and Communication Technologies | Level in EQF: EQF level 5

Higher technician in Web Applications Development

Thos i Codina [12/09/2022 – 12/06/2024]

City: Mataró | Country: Spain | Website: <https://www.iesthoscodina.cat/> | Level in EQF: EQF level 5

- JAVA
- HTML
- CSS
- JAVASCRIPT
- PHP
- VITE
- REACT
- XML
- SQL
- APACHE

Secondary Education

Salesians Mataró [12/09/2020 – 21/06/2022]

City: Mataró | Country: Spain | Website: <https://mataro.salesians.cat/>

LANGUAGE SKILLS

Mother tongue(s): Spanish | Catalan

Other language(s):

English

LISTENING B2 READING B2 WRITING B2

SPOKEN PRODUCTION B2 SPOKEN INTERACTION B2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

SKILLS

Python / Ollama / LLM / NLP / RAG / Machine Learning / Scikit-learn / Tensorflow / Pytorch / Matplotlib / Pandas / FastAPI / Docker / REST APIs / Git / Github / Neo4j / PostgreSQL / SQL / GraphDB / NoSQL / AWS / Azure / React / JavaScript / HTML / CSS / Java / PHP

DRIVING LICENCE

Driving Licence: B

CREATIVE WORKS

Vibe Flying — Intelligent Flight Search Engine A personal project built around a simple problem: when searching for flights, you never know if a price is good or not. Vibe Flying solves this by combining machine learning, multidimensional scoring and natural language search into a single platform:

- A model trained on thousands of real flights estimates the fair price for each offer, flagging deals and overpriced results automatically
- Each flight is scored across 6 dimensions — price, duration, quality, CO₂, flexibility and schedule — weighted to your traveller profile
- Natural language search interprets intent and resolves destinations conversationally
- A graph of 5,720 cities recommends destinations based on your interests, budget and flight tolerance

Built on 17 FastAPI microservices, a local LLM (Ollama), Neo4j and a medallion architecture on PostgreSQL that retrains the model with every search.

ABOUT ME

About Me

I'm a Software Developer specialised in AI & Big Data, with a background in Full Stack Web Development and 2+ years of professional experience in IT.

I work primarily with Python — Machine Learning, Deep Learning, NLP and data pipelines. I'm comfortable across the full development cycle, from model design to production deployment.

Currently, I've built and deployed an AI-powered flight search engine that goes beyond traditional comparators. The goal was to prove that AI and Big Data can genuinely enhance how users make travel decisions — not just show results, but help them think better.

The system combines natural language understanding (Ollama) to interpret open-ended queries, a flight price prediction model, a destination recommendation engine, and a custom heuristic scoring system that evaluates and ranks flights based on the user's own criteria.

You can explore the project live at vibe-flying.com

I'm looking for AI Engineer / AI Developer roles where I can keep building things that actually work in production.
